Desember 5th 2016

Dear Publisher or Editor in Kesmas,

We would like to submit a new manuscript entitled "Health Education Effect Towards Community Participation to Control *Aedes aegypti*'s Breeding Sites in BuahBatu and Cinambo Subdistricts, Bandung" for consideration by the Kesmas: Public Health Journal.

We confirm that this work is original and has neither been published elsewhere nor currently under consideration for publication elsewhere.

In this paper, we report on how health education affected community participation in controlling of *Aedes aegypti* breeding sites. This is significant because there was significantly increasing knowledge followed by decreasing CI (Container Index) level after health education had been given. The paper should be of interest to readers in Entomology and Public Health Study.

The study about health education effect toward dengue control practice was already done in several countries, however it have never been done in Bandung City. As we can see, the number of dengue fever patients in Bandung has been increasing since the last 3 years. We are interested to conducted this research to discover if the health education about dengue control affected community participation to control mosquito's breeding sites in Bandung City which is measured by knowledge level and larva index and the result showed health education can increase people knowledge and reduce the larva index. From this result we expected health education can be the one of the method in dengue control effort to decrease dengue cases in Bandung City, which is endemic area for dengue hemorrhagic fever (DHF).

Please address all correspondence concerning this manuscript to me at elsazahratul@gmail.com; liafaridah@unpad.ac.id; uun_s_sppd@yahoo.co.id.

Thank you for your consideration of this manuscript.

Sincerely,

[Zahratul Elsa]
