Dear Jurnal KESMAS,

We would like to submit a new manuscript entitled "Analisis Faktor Yang Berhubungan Dengan Penyakit Jantung Koroner Pada Wanita Usia > 45 Tahun di RS TNI AU Dody Sarjoto Makassar" for consideration by the Kesmas: Jurnal Kesehatan Masyarakat Nasional.

We confirm that this work is original and has neither been published elsewhere nor currently under consideration for publication elsewhere.

In this paper, we report on close relationship between dyslipidemia and coronary heart disease for women more than 45 years old. This is significant because it may be a consideration in handling coronary heart disease, especially in hospital in Indonesia. This problem usually ignored by health academics. The paper should be of interest to readers in health areas.

The results of this study attracted the attention of the reader or academics is due to dyslipidemia studies that have been neglected. Some of the problems are being addressed in lowering the risk of coronary heart disease as a routine control of blood pressure, blood sugar, maintain a diet that is spared the hypertension and obesity and others.

Scope of readers in Jurnal KESMAS are wider so it can be seen by all circles of both academics and practitioners. This is expected to be a basic consideration in a special handling and prevention of heart disease at the age of > 45 years.

Please address all correspondence concerning this manuscript to me at arimasriadi@gmail.com.

Thank you for your consideration of this manuscript.

Sincerely,

Masriadi
